

2/2-way ball valve with electric rotary actuator, ball valve in plastic, DN 10-50

- Suitable for aggressive media
- High flow rate value
- Actuator with adjustable limit switches
- Visual position indicator
- Safe blocked union nuts with Dual Block® Technology¹
- Multivoltage

The electric ball valve Type 8804 consists of an electrical rotary actuator and a 2/2 or 3/2-way ball valve made of plastic. Different housings and materials are available for various applications. The rotary actuator is compactly built. It can be used also as single device for the operation of other control elements (see datasheet Type 3003).

Special features

The ball valves are equipped with the so-called Dual Block® Technology. This system allows you to lock the union nuts in the preset position. It prevents them separating during operation.

Heat resistor and torque limiter are standard. The body is made of low inflammable material, classified acc. to UL 94 V0.
