Bürkert's range of precision activated ball valves fulfil a wide variety of on-off process applications. Available in 2 or 3 way and both single acting and spring return they exhibit high flow rates by virtue of their reliable full-bore design.

Control function A [SFA]

Single-acting actuator for pneumatically activated open/closed valve, normally closed by spring force.

Control function B [SFB]

Single-acting actuator for pneumatically activated open/closed valve, normally opened by spring force.

Control function I [SFI]

Open/close operation on either side without spring, flow direction above seat
