Type description

The 0330 valve is a direct-acting, media-separated pivoted armature valve. It is available as a 2/2 and 3/2-way variant. As a 3/2-way variant, it can be used as a distributor or mixing valve. Various diaphragm materials and circuit functions are available depending on the actual application. The housing range consists of brass, stainless steel, PEEK and polypropylene. The solenoid coils are moulded with a chemically resistant epoxy. Since the coil system is separated from the medium by a diaphragm, the valve is especially suitable for critical media such as aggressive acids and alkalis. The 0330 is equipped with manual override for start-up and testing. To reduce energy demands, all the coils can be delivered with electronic power reduction or as an impulse variant. The switching status can be indicated via position feedback as a binary or NAMUR signal.

5.1. Standard variant

General notes:

- The dimensions D1 and L1 apply to G thread.
- The dimensions D2 and L2 apply to NPT thread.
- The device can be attached via the existing holes on the bottom side. The hole pattern is 38×24/1.5×0.94. For metal bodies, use M4 screws. For plastic bodies, use either self-tapping screws or a body with metric thread inserts (variable codes ACxx or ADxx). The screw-in depth must be observed. Refer to **operating instructions Type 0330** ▶.
- The dimensions of the cable plug Type 2518 can be found in chapter **“Cable plug Type 2518, form A according to DIN EN 175301 - 803” on page 23**.
