

5/2-way solenoid valve for pneumatic applications

- Compact valve
- Fast switching times
- Low power consumption
- Rocker pilot in DC

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

	Type 8644 AirLINE SP electropneumatic automation system	▶
	Type 8640 Modular valve island for pneumatics	▶
	Type 2516 Cable plug, form C according to DIN EN 175301-803	▶

Type description

The valves Type 6527 consist of a pilot rocker solenoid valve Type 6106 and a pneumatic seat valve. The action principle allows the switching of high pressures combined with low power consumption and short switching times. The valves are extendable and, with plug connection to the rear, can be preferably used on valve islands (Types 8640 or 8644) or, with tag connectors to the front, on valve blocks for activating pneumatic actuators. All the pilot valves are equipped with manual override as standard.
