

Pressure transmitter with CANopen interface

- Ceramic thick film or metallic thin film strain gauge measuring principles
- Process connections: G, NPT in 1/4" or G 3/4" (with hygienic flush diaphragm) or 1 1/2" clamp
- Linearised and temperature-compensated measuring ranges from -1...5 bar or 0...0.25 bar to 0...16 bar selectable, relative pressure
- Media temperature range depends on the measuring principle: -20...+85 °C (ceramic), -40...+125 °C (metallic)
- Access to measured value, device status and settings via the CANopen interface

Product variants described in the data sheet may differ from the product presentation and description.

Type description

The device Type 8312 is used for measuring relative pressures (or absolute pressures, on request) in liquid and gaseous media.

The pressure transmitter is available with either a metallic thin-film strain gauge or a ceramic thick-film strain gauge. As a result, the specifications of the device depend on the type of technology it is equipped with.

The main differences are: the pressure measurement ranges available, fluid temperature limitations, the types and sizes of process connections available, the presence or absence of a process connection seal and the availability of the flush diaphragm option.

The device digitises the pressure value and makes it available through the CAN-open digital communication interface (CAN slave). Indeed, instead of an analogue output, this device offers a digital CANopen interface. This allows bidirectional data transfer, e.g. with a CAN/Ethernet gateway, or directly to the PLC that is itself equipped with a CAN interface.

CAN devices can also be connected to the Bürkert digital communication interface bÜS. A driver used for data exchange and settings of the Type 8312 is integrated in the PC tool Bürkert Communicator, which is available on our website.

Several useful additional functions have been implemented through the DS 404 device profile.

2. Approvals and conformities

2.1. Conformity

In accordance with the Declaration of Conformity, the product is compliant with the EU Directives.

2.2. Standards

The applied standards which are used to demonstrate compliance with the EU Directives are listed in the EU-Type Examination Certificate and/or the EU Declaration of Conformity.

2.3. Pressure Equipment Directive (PED)

The device conforms to article 4, paragraph 1 of the Pressure Equipment Directive (PED) 2014/68/EU under the following conditions:

Device used on a pipe

Note:

- The data in the table is independent of the chemical compatibility of the material and the fluid.
- PS = maximum admissible pressure (in bar), DN = nominal diameter of the pipe

Type of fluid	Conditions
Fluid group 1, article 4, paragraph 1.c.i	DN ≤ 25
Fluid group 2, article 4, paragraph 1.c.i	DN ≤ 32 or PS*DN ≤ 1000
Fluid group 1, article 4, paragraph 1.c.ii	DN ≤ 25 or PS*DN ≤ 2000
Fluid group 2, article 4, paragraph 1.c.ii	DN ≤ 200 or PS ≤ 10 or PS*DN ≤ 5000

Device used on a vessel

Note:

- The data in the table is independent of the chemical compatibility of the material and the fluid.
- PS = maximum admissible pressure (in bar), V = vessel volume

Type of fluid	Conditions
Fluid group 1, article 4, paragraph 1.a.i	V > 1 L and PS*V ≤ 25 bar.L or PS ≤ 200 bar
Fluid group 2, article 4, paragraph 1.a.i	V > 1 L and PS*V ≤ 50 bar.L or PS ≤ 1000 bar
Fluid group 1, article 4, paragraph 1.a.ii	V > 1 L and PS*V ≤ 200 bar.L or PS ≤ 500 bar
Fluid group 2, article 4, paragraph 1.a.ii	PS > 10 bar and PS*V ≤ 10000 bar.L or PS ≤ 1000 bar

5. Product operation

5.1. Functional overview

No.	Description
1	The analog signal from the pressure cell is digitized with 12 Bit resolution.
2	The pressure signal is digitally calibrated at the factory.
3	The sensor monitoring facility continuously checks the correct performance of the sensor signal and triggers high priority emergency telegrams in the event of an error.
4	The pressure measurement can be scaled to any dimensional unit (or in % of range).
5	Fine calibration features and auto-zeroing function and a freely adjustable shift of the characteristic.
6	Undesirable signal fluctuations can be suppressed through the constant (adjustable) filter.
7	The measurement output has a freely selectable decimal place.
8	Free choice of upper and lower limits for range monitoring. The result is given as a status byte in addition to the measurement in the PDO frame.
9	The drag pointer ("min./max. index") function records the minimum and maximum pressure values.
10	Date and name of the last servicing action can be stored.
11	An emergency telegram is triggered in the event of a sensor fault.
12	The PDO frame contains a 32-bit measurement and a 8-bit status. The measurement output can be controlled by means of different trigger conditions.
13	Parameters can be set through SDO frames, and measurements and status can be requested.
14	The heartbeat signal or Node Guarding can be used to additionally monitor the transmitter function.
15	The transmission of measurements can be controlled through the Sync command.
16	NMT frames serve to control the operational state of the transmitter.
17	The CAN Node ID and CAN baud rate are set via LSS or SDO, according to choice.
