

## Angle for self-draining of diaphragm valves

Presentation: Installation for self-draining

### Self-drainage-angle

Bürkert has determined self-drainage-angles for the optimum draining of diaphragm valve bodies.

The self-drainage-angle ( $\alpha$ ) depends on the body size (diaphragm size) and the inner diameter of the port connection (DN).

For optimum self-draining, the angles given in the following tables apply.

#### Mark on the valve body:

For cast valve bodies (VG) and forged steel valve bodies (VS) as well as for tube valve bodies (VP), a mark is provided at the port connection. The mark serves as an orientation aid and must point upwards (see image "[Presentation: Installation for self-draining](#)").

**Observe!** The actual self-drainage-angle must be set with a suitable measuring tool.

The term self-draining suggests that the valve drains itself completely when installed properly. Due to the factors listed below, however, it cannot be assumed that the valve will drain itself without leaving any residue.

Draining is influenced by the following factors, among others:

- Inner diameter of the pipeline
- Surface quality
- Inclination angle to the line axis
- Medium (viscosity and adhesion)

The specified angles are to be understood as a guide value and may be subject to certain fluctuations due to permissible manufacturing tolerances.

The installer and the operator are responsible for ensuring that the system drains itself.

### Inclination angle of the pipeline

The inclination angle of the diaphragm valves is the responsibility of the installer and operator and should correspond to the inclination angle of the pipeline.

For the pipeline, we recommend the inclination angle according to the valid ASME BPE.

## Tables for self-drainage-angles

The self-drainage-angles of the valve bodies with a welded connection also apply to the valve bodies with a clamp connection.

Please contact your Bürkert sales department to determine the self-drainage-angles of welded connections not listed in the tables.

The installer and the operator are responsible for ensuring that the system drains itself.

Valve body with a welded connection according to DIN EN ISO 1127 / ISO 4200 / DIN 11866 series B						
Port connection code	DN	Diaphragm size	Pipe dimension	Self-drainage-angle ( $\alpha$ )		
				Forged steel valve body Type KB04 (VS/VH)	Cast valve body (VG)	Tube valve body (VP)
